

PSYCHEDELIC PSYCHOTHERAPY

A new approach for treating Depression, Anxiety, and PTSD

Come join the clinicians at Liminal Medicine to discuss a new approach for treating depression, anxiety, and PTSD. In this hour we will explain how Ketamine-Assisted Psychotherapy works as a psychedelic to alleviate symptoms of depression and anxiety as well as other issues. We will also discuss the psychedelics that are in the process of being FDA approved: MDMA, psilocybin, etc. The benefits and drawbacks of these treatments as well as who would benefit most from this type of therapy will also be covered. Question and answer session to follow. Check out www.liminal-med.com for more information about the clinicians and their practice.

Please join us for this enlightening and important seminar!

WEDNESDAY, FEBRUARY 21ST

6:00 - 7:00PM

Located in the conference room

Free to members. Guest fees apply.
